

MinFarm Tech Limited

MinFarm is an engineering product company, focused on supporting LoRaWAN in remote locations. Our engineering team's combined skills are in hardware engineering for extreme environments, off-grid power, and software IoT protocol optimization for non-standard satellite links. A focus on developing and testing in remote locations ensures our products work reliably and cost efficiently. MinFarm's engineering team have over 20 years' experience in providing remote communication solutions to support your critical data operations.
